

Onsite Fleet Fueling

For Android

Automated Wireless Environments Inc
Newton, NJ - Sorel Tracy, QC

Solving the unique challenges of onsite refueling since 1991

Provide your fleet customers with detailed vehicle delivery summaries with the dynamic and flexible real-time system; AWF. The driver maintains complete control of the delivery with easy to use controls and tools.

Managing the Fleet: The AWD.NET system provide the dispatcher with the ability to manage the customer's fleet of vehicles in the office. The driver in the field has robust tools to maintain the customer's vehicles and have the two principles communicate in real-time. Creating and tagging vehicles onsite is a straightforward process.

Fleet Flexibility: The AWF system has completely eliminated the typical burdens associated with onsite fueling. AWF eliminates paperwork and allows the drivers to capture the data on a rugged touch screen handheld computer that is fully connected to single or dual meter electronic metering registers at all times. Dispatchers can immediately connect to any or all of the on board computers to update any ticket, add or delete tickets, pull back tickets, add new instructions and change pricing globally or on a single ticket.

Total Vehicle Control: With a simple scan of the barcode on the truck being fueled, the system quickly identifies the vehicle and allows the driver to capture data such as truck number, VIN number, license plate, odometer etc. The dispatcher can chat at any time to drivers through the device, even when the driver is at the end of the hose. Once the fleet delivery is complete, the driver can request a signature from the customer and produce a detailed, vehicle by vehicle invoice to present to the customer.

Powerful Reporting: The integrated AWF Active Reports embedded directly in the control center gives dispatchers the ability to run up to 30 reports. Some of these reports include: end of day shift detail by truck, inventory detail, load report, tax reports to key performance indicator stats. With AWF Web Reporting **your customers** can run their own reports such as: Delivery by Ticket, Vehicle, Truck, On Road, Off Road Totals, Ticket Details, Ticket Info, Vehicle by ticket, Odometer and so many more.

**National Type Evaluation Program
Certificate of Conformance: 16-059**

*"We originally had a competing wireless product installed across our fleet. It was clear that the solution was not a success. We searched for a true technology partner to replace the entire system. We found Automated Wireless Environments, Inc. After choosing AWE it was evident we implemented a rock-solid solution. Our investment has produced a staggering ROI. We have gained time, information, and additional services that we can market to our customers with our investment in AWE's solutions."
John Yocum, Owner Yocum Oil*
